

## **Reinstalling Existing Client Computers with VinNOW**

Reinstalling an existing client computer where no changes have been made to windows user accounts or permissions is done from the client computer itself. There should not be any changes that need to be made on the database machine or server.

From the client machine, Uninstall the VinNOW program by going to the start menu, all programs and just above the VinNOW icon you will see an option to uninstall VinNOW. Select this option and follow the prompts to complete the uninstall of VinNOW.

If this option does not work or is not available, you can go to the Control Panel and select to remove VinNOW in add/remove programs. Follow all prompts.

Once the program is uninstalled:

From the client computer, navigate across your network to the server and into the *VinNOW\_DB\Update* folder. Run the *Setup.exe* program to install VinNOW on the client computer. Follow all prompts.
