

Sales By Report Group

Product Report Groups can be assigned to products to enable this report to be run to total sales based on the groups. This report has many uses including providing information to wineries that have multiple labels or co-op tasting rooms that need to provide separate product sales reporting on products.

Product Sales by Report Group will look at the report group you have assigned in each product and will report sales based on the groups. The report can be run to show all groups or filtered for specific groups.

The report includes quantity, retail price, discount price, net price, tax for all products designated in a report group, including wine by the glass.
