

Sales by Sales Person

This report can be run in summary mode for totals or in detail mode which will include payment type and invoice numbers. This report will provide information on products, quantity, retail price, discounts and net price broken down by sales person for user designated reporting periods. The report includes all sales within the time period, both paid invoices as well as un-paid invoices.

Like other product sales reports, bundles will be listed but without "Totals for Bundle" being included as the sales will be reflected as the individual bundle products. Since the "summary" mode of this report is only totals you will see the category but with no sales. If you need the information on the specific bundle sales/invoices, run the report in detail mode and you can drill down into the invoice number to see the invoice itself.
