

Inventory Value Report

The Inventory Value report like the Inventory Quantity Report can also be run by Product or Location and displays information on inventory avail for sale.

Inventory by Product shows:

Category
Product Number
Description
Qty on Hand - this can be either cases or bottles depending on how you have run the report
Gallons
Alcohol %
Retail Value
Cost Value

This report also totals the Qty on hand, Gallons, Retail Value and Cost Value Columns in sub totals by category and includes a Grand Total at the bottom of the report.

Note: Please keep in mind that if you have Wine and Non-Wine items on the report, the Grand Total figure will not be a usable amount as it will tally all items even though they are not like items. To get an accurate grand total on reports with mixed units, tally the sub totals for each unit type.

Inventory by Location Shows:

Location
Category
Product Number and Description
Lot #
Qty on hand
Gallons
Alcohol %
Retail Value
Cost

Totals will be subtotaed and display quantity on hand broken down into 6 and 12 bottle cases and display the sub total of gallons for each location.

The Grand total will display the quantity in a unit of bottles (for wine) and display total gallons.
