

## Credit Card Expiration

This report allows you to create a report for all customers having a credit card that has expired or will expire in a certain number of days defined by the user.

You can also use the drop down "wine club" filter to search on all customers (blank), or customers belonging to a specific wine club (use the drop down to select a specific club), or customers belonging to any wine club (all). If you search by wine clubs the return will be for credit cards listed in the customers wine club tab.

This report should always be run before starting a Group Order process for a wine club so you may update customer records with new cards if needed or update credit card expiration dates before processing your Wine Club.

If the customer has another card on file with a future expiration date the report will indicate this with a ++ next to the card type
