

## Shipping Status

This is a shipping report that shows the status of all packing slips that have been created. If the shipments were created in the UPS integration, then the UPS charges will display. **The UPS charges are the book rate charges and are not your actual contracted prices with UPS.**

Using the Selection Criteria tab, you can choose to display the report by many different ways.

This report can be used to show what was shipped and to compare to a UPS bill. The Ship Amount column shows actual charges on the invoices that you charged the customer to ship the product
